

VITASELENE®

VITASELENE is a medical association of vitamins and oligoelements with interesting antioxidant properties; this association is a dietetic supplementation used for the prevention of many incurable diseases.

In fact human body, in his activity to protect his own equilibrium, uses his "antioxidant" compounds to chelate the free radicals responsible for the oxidation reactions. These antioxidants chelate the free radicals and stop their bad action on cells; Two systems of antioxidants are available in man; the vitamins such as Vit.C, E and β -Caroten, and the oligoelements such as Selenium (Se) and Zinc (Zn).

Selenium is an essential nutrient vital for health.

Chemical reactions inside our bodies need it, for this reason, Selenium must be administered daily.

These reactions help maintain our immune system- the body's natural defense against illness.

Selenium helps protect cells and tissues from damage by oxidants such as "Free Radicals".

Zinc is the element of superoxide dismutase. This enzyme is responsible for securing immune system.

β -Caroten is essential for vision in dim light and for the maintenance of mucous tissue.

Vitamin C helps maintain healthy connective tissues and cell walls and Vitamin E stabilizes cell membranes, protecting their unsaturated fatty acids from oxidation.

Studies have shown that taken together, these nutrients are more effectively utilised by the body and are stronger antioxidants than if they were taken separately.

These two systems collaborate deeply and permit sure prevention against aging and carcinogenic factors.

COMPOSITION	per capsule
Vit E	45 mg
Vit C	90 mg
β -Caroten	9 mg
Selenium (organic)	100 μ g
Zinc	10 mg

These amounts have been carefully calculated to provide a meaningful increase in your level of antioxidant protection.

VITASELENE® contains only natural food grade Selenium, organically bound to yeast- the same form found in nature and most easily digested.

VITASELENE® AND CANCER

The free radicals and many exogenous factors, such as tobacco, sun light, X-Rays, pollution are able to cause dangerous and incurable diseases. These diseases are prevented by the antioxidants. VITASELENE® contains the antioxidants necessary to protect the human body.

VITASELENE® helps protect the cell membranes. Epidemiological studies showed that poor plasma concentrations of all essential antioxidants are associated with increased relative risks; in particular, low level of β -caroten and Vit. E with the risk of cancer.

VITASELENE® indications result from antioxidant properties of its compounds.

In man VITASELENE® permits:

a prophylactic and therapeutic activity against many kinds of carcinogenesis, VITASELENE® acts as a powerful quencher of singlet oxygen and a scavenger of the free radicals which are involved in the etiology of cancer, especially at low partial oxygen pressure, thus VITASELENE® provides protection against oral mucosa cancer in tobacco smokers (oral leukoplakia or erythroplakia) oesophageal cancer, stomachal cancer, and lung cancer. Its important benefit is the reduction of the death rate from cancer.

VITASELENE® AND HEART DISEASE

VITASELENE® permits also to prevent the ischemic heart diseases by prohibiting the oxidation of LDL to OMLDL which leads to unregulated lipid accumulation in monocyte-derived macrophages to form foam cells that become visible as the fatty streak. VITASELENE® prevents from atherosclerosis, angina pectoris and all kinds of ischemic heart diseases.

VITASELENE® AND CATARACT

VITASELENE® prevents against cataract. Studies showed a clear correlation between elevated plasma antioxidant levels and diminished risk of developing cataract.

VITASELENE® AND ACNE

β -caroten and Vitamin C have a positive effect on the immune system. They enforce the resistant against infections.

β -caroten is the Vitamin A precursor. It preserves the integrity of the skin. Yeast is a very effective treatment for acne. It has antistaphylocoque activity.

VITASELENE® is indicated for the treatment of acne and other skin diseases.

VITASELENE® AND DIABETES

Vitamin E has beneficial effect on insulin and glycemia.

VITASELENE® AND IMMUNITY

The immune system of our organism is enhanced by antioxydant combinations.

Researches on this subject showed that it can help the immune system against AIDS virus.

VITASELENE® AND DEFICIENCY

Aged people, over 60 years old, need Zinc supplement.

Selenium also is considered as vital element. The daily recommended dose is not fulfilled.

This is why supplement of Selenium is necessary.

POSODOLOGY

1 to 2 capsules a day.

ADVERSE EFFECT

No serious adverse effects.

With high doses, diarrhea and tiredness can be observed.

PRESENTATION: pack of 30 capsules.
