

DERMOFIX® GYNO OVULE
300 mg Vaginal suppository

Pharmacological action

Sertaconazole is a new topical antimycotic endowed with a potent fungicidal activity, with a broad activity spectrum where the pathogenic yeasts (*Candida albicans*, *C. tropicalis*, *C. spp.*, *Pityrosporum orbiculare*), dermatophytes (*Trichophyton*, *Epidermophyton* and *Microsporum*) and other causing and accompanying agents in skin and mucous membranes infections like the gram-positive germs (*Staphylococcus* and *Streptococcus*) are included.

Composition

Per vaginal suppository:

Sertaconazole nitrate: 0,3 g

Excipients: solid semi-synthetic glycerides (witespol and suppocire), anhydrous colloidal silica, q.s. 3,0 g

Indications

Local treatment of infections by *Candida* of the vaginal mucosa.

Dosage

One vaginal suppository at night when going to bed, introduced deeply into the vagina, preferably while lying down. The vaginal suppository can be used during menstruation. In general, 1 vaginal suppository suffices to eradicate the vaginal mycosis. However, if it persists, a second vaginal suppository can be applied after 7 days.

Contraindications

Known hypersensitivity to an antimycotic of the imidazoles group or to one of the excipients.

Interactions

Have not been described.

Precautions

Candidiasis: It is not recommended to use a soap with acid pH (pH favouring the multiplication of *Candidas*).

Side-effects

The absence of systemic absorption of Sertaconazole after the application of a vaginal suppository by vaginal route, makes it hardly probable that side-effects appear.

Use during pregnancy and lactation

No embryotoxic or teratogenic effect has been observed in animal studies.

Overdosage

Not applicable.

Preservation

Keep at a temperature lower than 30°C.

Presentation

Gynecologic suppository, unit box.

Keep out of reach of children

On medical prescription
